

Figure 1 — Defining the drug-indication approval-forecast task

A Prediction-unit comparison

| Prior task               | Prediction unit                 | Limitation                                        |
|--------------------------|---------------------------------|---------------------------------------------------|
| LOA analysis             | disease / phase / modality rate | not individualized                                |
| Drug-level approval      | drug                            | not disease-specific                              |
| Trial-outcome prediction | trial                           | not final approval, often trial-feature dependent |
| This work                | drug-indication pair            | trial-agnostic approval forecast                  |
